Mobile number: +37063179930

City: Vilnius

Age: 23 y.

About me:

I am a graduate at Vilnius Tech university, my Bachelor's degree is Information systems engineering. My studies concentrated in electronics and information technologies, but my interests and experience are in programming. That is why I am looking for a job in entry or junior position or internship with possibility to become an employee in a company. As it is now all my experience came from self-learning, but I did not put it in real practice besides my Bachelor's thesis. I am always willing to learn new things, improve and extend my current knowledge and my current wish is to use all that knowledge for something useful and practical that is why I am searching for a job, where my current and new skills will be used for the benefit of the company.

My skills:

HTML 5: average

CSS 3 : average

PHP : basics–average

JavaScript: average

Node.js : basics–average

Git : basics

SQL : basics

C, C++, python, java: basics

Programs and systems that I had an opportunity to work with:

Postman, AutoCAD, 3ds Max, Node.js, WordPress, Android Studio, Matlab

Bachelor's thesis

In my Bachelor's project I had to create a system, that recommends sightseeing spots in Lithuania for a user. I created a web page, where user can choose which places he wants to see and after the user choses a particular place, the system finds similar places to user's chosen place. It is done by using content-based algorithm. The user can also register which lets him rate places he checked, with that the system can recommend places similar to places a user rated positively. It is done by using linear-regression algorithm.

Technologies used in this project:

Node.js, Express, EJS, JWT, MongoDB, Mongoose, bcryptjs, Google API (Javascript Google Maps, Google directions, Custom Google Search engine for image search).
